

# MOVEMENT

IS AN IMPORTANT ACTIVITY

IN **HIGH-BAY WAREHOUSES**

BUT,

SOME **MOVEMENTS**

**NEED TO BE STOPPED!**

Keep the goods in place.

**LOKET** PROTECTION NETS

# WHO WE ARE?

We produce and install vertical and horizontal PROTECTION NETS in high-bay warehouses to protect stored goods from falling...

**LOKET**  
Creating Safety

We are also a supplier of various net materials for safety, construction, sport, industrial, marine market, and more...

---

**Our advantage is our own production of custom made nets and their worldwide installation.**

# SAFETY NETTING

Extremely flexible installation method which can be conducted at any time point of the construction process.

The safety net consists of woven, deep-dyed polypropylene filament yarn. This is a highly tearproof and stable synthetic fibre. Thanks to the knotless weave, which is no less stable than a knotted connection, the net keeps its shape perfectly.

The material is 100% non-toxic, and contact with mucus membranes (mouth, eyes) is also completely safe. Thanks to their weather resistance and UV stability, our safety nets are suitable for outdoor and indoor use.

These protection nets are used to prevent goods from falling from the racks because of their ability to protect the warehouse employees and prevent interruptions in conveyor operability.

All of our nets are tested and approved by an independent laboratory in addition to our own testing range.

We do not only have certified nets and our industrial climbers, but also vast experience in successful projects throughout Europe.
